

# **UAH Mars Drone ASW Architecture Design Document**

## **Index**

- 1 Introduction**
- 2 Applicable and Reference Documents**
- 3 Terms, definitions and abbreviated terms**
- 4 Software Design Overview**
- 5 Software Design**
  - 5.1 Software Static Architecture**
  - 5.2 Software Dynamic Architecture**
    - 5.2.1 Computational Model**
    - 5.2.2 Software Behaviour**
  - 5.3 Real-Time Requirements**
  - 5.4 Software Components Design**
  - 5.5 SRD Req Coverage Matrix**
- 6 Traceability**

# 5 Software Design

## 5.1 Software Static Architecture

## 5.2 Software Dynamic Architecture

### 5.2.1 Computational Model

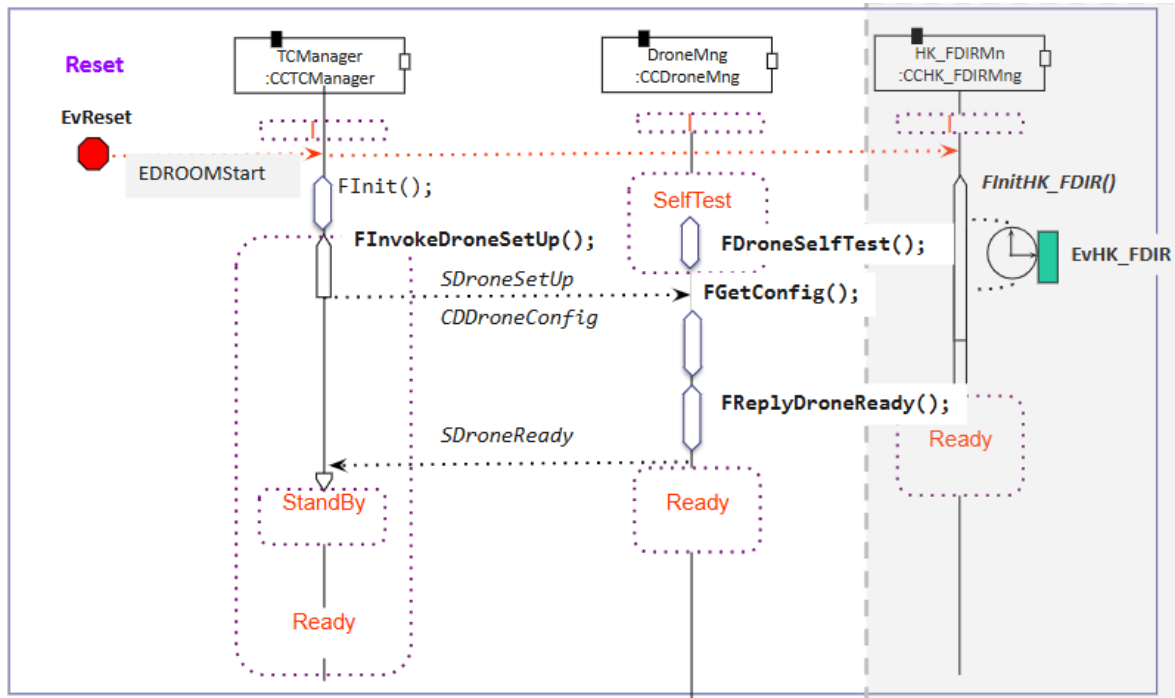

### 5.2.2 Software Behaviour

#### Scenarios

| Event                              | Description                |
|------------------------------------|----------------------------|
| <i>EvRxTC (external IRQ)</i>       | TC reception               |
| <i>EvAcceptedTC (internal)</i>     | TC acceptance              |
| <i>EvRejectedTC (internal)</i>     | TC rejection               |
| <i>EvToReboot (internal)</i>       | System Reboot              |
| <i>EvHK_FDIR (timing)</i>          | Periodic HK and FDIR Mng   |
| <i>EvHK_FDIR_TC (internal)</i>     | HK_FDIR TC Execution       |
| <i>EvReset (reset)</i>             | System Reset               |
| <i>EvInitFlightPlan (internal)</i> | Flight Plan initialization |
| <i>EvFlightCtrl (timing)</i>       | Control during flight      |
| <i>EvFlightPlanDone (internal)</i> | Flight plan validation     |
| <i>EcDroneTC (internal)</i>        | Drone TC execution         |

*TODO 02 Añade los diagramas de secuencia de aquellos escenarios en los que participa el componente DroneMng*

## Ev\_Reset

## Ev\_DroneTC

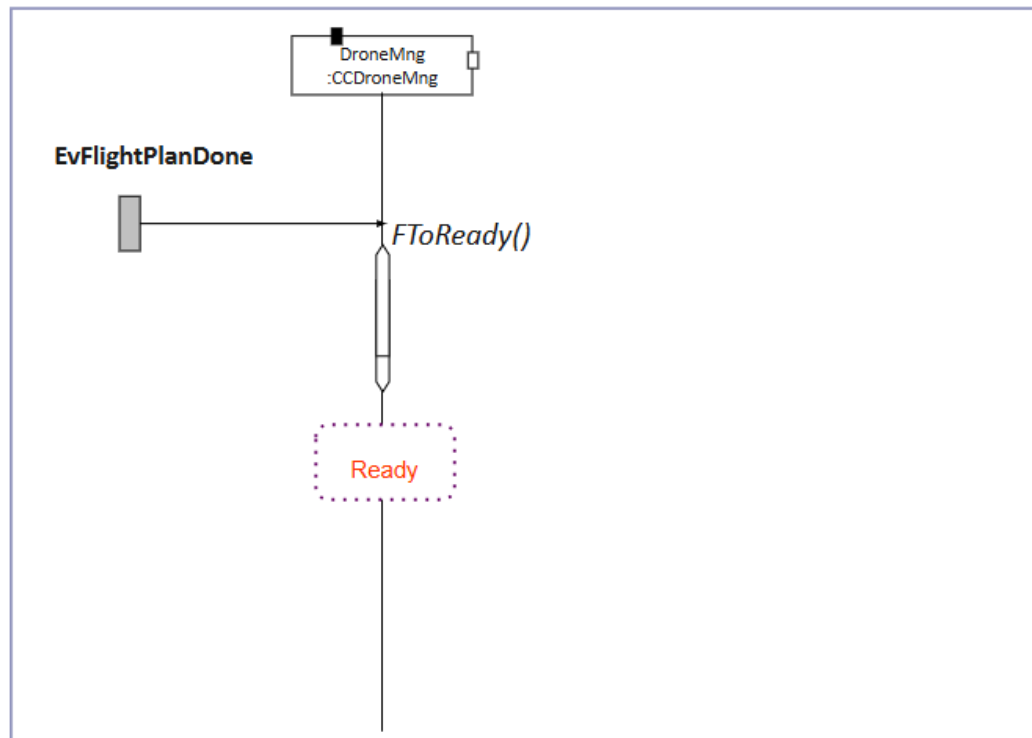

## Ev\_InitFlightPlan

## Ev\_FlightCtrl

## Ev\_FlightPlanDone

### 5.3 Real-Time Requirements

### 5.4 Software Components Design

#### 5.4.1 CCDroneMng

##### 5.4.1.1 Interfaces

*TODO 03 Añade los puertos que definen las interfaces de la clase CCDroneMng*

## CCDroneMng Interfaces

### 5.4.1.1 Behaviour

*TODO 04 Añade el diagrama de estados de la clase CCDroneMng*

**TODO 05 Añade las variables de la clase CCDroneMng**

**TODO 06 Añade la condición de disparo y la acción de cada una de las transiciones (utiliza el diagrama de estados varias veces si lo ves necesario)**

**TODO 07** Añade la guarda y la acción asociada de cada una de las ramas de un choice points (utiliza el diagrama de estados varias veces si lo ves necesario)

**TODO 08** *Añade el código de las acciones y guardas (marca en azul el código que se genera automáticamente al solicitar un servicio)*

### Guardas:

```
bool GExecFlightPlan(){
    return pus_service129_flight_plan_ready();
}

bool GFlightPlanDone(){
    return pus_service129_flight_plan_done();
}
```

### Acciones:

```
void FinitFlightPlan()
{
    Pr_Time time;
    pus_service129_init_flight_plan();
    time.GetTime();
    time += Pr_Time(0, 100000);
    VNextCtrl = time;

    Timer.InformAt(time);
}

void FprogNextCtrl()
{
    Pr_Time time;
    time = VNextCtrl;
    time += Pr_Time(0, 100000);
    VNextCtrl = time;

    Timer.InformAt(time);
}
```
